ARTICLE IX

EDUCATION

SECTION 1. **Public education.--**

(a) The education of children is a fundamental value of the people of the State of Florida. It is, therefore, a paramount duty of the state to make adequate provision for the education of all children residing within its borders. Adequate provision shall be made by law for a uniform, efficient, safe, secure, and high quality system of free public schools that allows students to obtain a high quality education and for the establishment, maintenance, and operation of institutions of higher learning and other public education programs that the needs of the people may require.

Select Year: 2003

Go

The 2003 Florida Statutes

Title XLVIII
K-20 EDUCATION CODEChapter 1011
PLANNING AND BUDGETING[View Entire Chapter](#)

1011.62 Funds for operation of schools.--If the annual allocation from the Florida Education Finance Program to each district for operation of schools is not determined in the annual appropriations act or the substantive bill implementing the annual appropriations act, it shall be determined as follows:

(1) COMPUTATION OF THE BASIC AMOUNT TO BE INCLUDED FOR OPERATION.--The following procedure shall be followed in determining the annual allocation to each district for operation:

(a) *Determination of full-time equivalent membership.*--During each of several school weeks, including scheduled intersessions of a year-round school program during the fiscal year, a program membership survey of each school shall be made by each district by aggregating the full-time equivalent student membership of each program by school and by district. The department shall establish the number and interval of membership calculations, except that for basic and special programs such calculations shall not exceed nine for any fiscal year. The district's full-time equivalent membership shall be computed and currently maintained in accordance with regulations of the commissioner.

(b) *Determination of base student allocation.*--The base student allocation for the Florida Education Finance Program for kindergarten through grade 12 shall be determined annually by the Legislature and shall be that amount prescribed in the current year's General Appropriations Act.

(c) *Determination of programs.*--Cost factors based on desired relative cost differences between the following programs shall be established in the annual General Appropriations Act. The Commissioner of Education shall specify a matrix of services and intensity levels to be used by districts in the determination of the two weighted cost factors for exceptional students with the highest levels of need. For these students, the funding support level shall fund the exceptional students' education program, with the exception of extended school year services for students with disabilities.

1. Basic programs.--

a. Kindergarten and grades 1, 2, and 3.

b. Grades 4, 5, 6, 7, and 8.

c. Grades 9, 10, 11, and 12.

2. Programs for exceptional students.--

a. Support Level IV.

b. Support Level V.

3. Secondary career and technical education programs.--

4. English for Speakers of Other Languages.--

(o) *Year-round-school programs.*--The Commissioner of Education is authorized to adjust student eligibility definitions, funding criteria, and reporting requirements of statutes and rules in order that year-round-school programs may achieve equivalent application of funding requirements with non-year-round-school programs.

(p) *Extended-school-year program.*--It is the intent of the Legislature that students be provided additional instruction by extending the school year to 210 days or more. Districts may apply to the Commissioner of Education for funds to be used in planning and implementing an extended-school-year program. The Department of Education shall recommend to the Legislature the policies necessary for full implementation of an extended school year.

(q) *Determination of the basic amount for current operation.*--The basic amount for current operation to be included in the Florida Education Finance Program for kindergarten through grade 12 for each district shall be the product of the following:

1. The full-time equivalent student membership in each program, multiplied by
2. The cost factor for each program, adjusted for the maximum as provided by paragraph (c), multiplied by
3. The base student allocation.

(r) *Computation for funding through the Florida Education Finance Program.*--The State Board of Education may adopt rules establishing programs and courses for which the student may earn credit toward high school graduation.

(2) DETERMINATION OF DISTRICT COST DIFFERENTIALS.--The Commissioner of Education shall annually compute for each district the current year's district cost differential. The district cost differential shall be calculated by adding each district's price level index as published in the Florida Price Level Index for the most recent 3 years and dividing the resulting sum by 3. The result for each district shall be multiplied by 0.008 and to the resulting product shall be added 0.200; the sum thus obtained shall be the cost differential for that district for that year.

(3) INSERVICE EDUCATIONAL PERSONNEL TRAINING EXPENDITURE.--Of the amount computed in subsections (1) and (2), a percentage of the base student allocation per full-time equivalent student or other funds shall be expended for educational training programs as determined by the district school board as provided in s. 1012.98.

(4) COMPUTATION OF DISTRICT REQUIRED LOCAL EFFORT.--The Legislature shall prescribe the aggregate required local effort for all school districts collectively as an item in the General Appropriations Act for each fiscal year. The amount that each district shall provide annually toward the cost of the Florida Education Finance Program for kindergarten through grade 12 programs shall be calculated as follows:

(a) *Estimated taxable value calculations.*--

1.a. Not later than 2 working days prior to July 19, the Department of Revenue shall certify to the Commissioner of Education its most recent estimate of the taxable value for school purposes in each school district and the total for all school districts in the state for the current calendar year based on the latest available data obtained from the local property appraisers. Not later than July 19, the Commissioner of Education shall compute a millage rate, rounded to the next highest one one-thousandth of a mill, which, when applied to 95 percent of the estimated state total taxable value for school purposes, would generate the prescribed aggregate required local effort for that year for all districts. The Commissioner of Education shall certify to each district school board the millage rate, computed as prescribed in this subparagraph, as the minimum millage rate necessary to provide the district required local effort for that year.

Research on the Florida Education Finance Program
The Florida Price Level Index, the Sparsity Supplement, and Discretionary Millage

Summary and Recommendations

In this report, we consider the accuracy and appropriateness of several aspects of the Florida Education Finance Program (FEFP) – the Florida Price Level Index (FPLI), the Sparsity supplement, and Discretionary Millage.

The FPLI is the basis of the FEFP's personnel cost adjustment, the District Cost Differential (DCD). We find that FPLI as it stands is as very good measure of variation in the costs of goods and services across counties. We see no immediately feasible way to improve it in that respect. However, the current version of the FPLI suffers a serious problem when used as the basis of a personnel cost adjustment – it ignores the role of amenities. Amenities are important because, if a location is more desirable as a place to live, "compensating differentials" will develop in housing and labor markets. In the housing market, prices will be driven up by higher demand to live in the area, while in the labor market, people will willingly work for less, since the desirability of the location itself provides compensation. We develop an alternative amenity adjusted and statistically and geographically smoothed version of the FPLI, denoted FPLI_AS, that does not have this problem. FPLI_AS exhibits far less spatial variation than does the current version of the FPLI, and its level of variation is less likely to trend up significantly over time. Since a DCD is clearly required on both theoretical and empirical grounds to achieve the mandated equality of educational resources across districts, we recommend switching to the FPLI_AS.

In our investigation of the sparsity supplement, we find that the existing sparsity supplement far overestimates the adjustment needed to maintain an equalized base level of per student educational resources across districts. While the theoretical case that smaller districts may have higher per pupil costs is clear, theory says only that - it offers no guidance as to whether difference applies to many schools, or only the smallest few, or whether it is substantial or quite small. Empirical evidence is mixed as to whether actual cost differences rise to the level of economic or statistical significance for districts as large as Florida's. Furthermore, it is not theoretically clear that such differences, if they exist, require any adjustment, since small districts could consolidate entirely, or could consolidate only certain functions, if they thought there truly were gains to increased size. If such an adjustment is needed, however, evidence is clear that the current adjustment is far too large. Additionally, if a sparsity supplement is needed, and if there is a reason to have discretionary millage, the sparsity supplement should not be offset by the wealth adjustment, which has the effect of reducing the ability to provide local discretionary funding beyond the base level of resources dictated by the FEFP, but only for sparse districts.

We find there are a number of advantages to allowing some level of unequalized discretionary millage. It provides a direct incentive for performance to schools, allows parents who would like to spend more on their children's education than the state provides some opportunity to do so through the public schools, and encourages efficiency in housing markets by allowing communities more flexibility to be what their residents desire, thus increasing the Florida's tax base. While it increases intrastate funding

variation, it increases state average funding and therefore reduces national funding inequality. The major remaining question is how much discretion should the school board have without turning to the electorate, and if and to what extent discretionary effort should be power equalized for districts with a lower per student tax base.

Based on our findings, we make four main recommendations.

- 1) Switch to an amenity adjusted and statistically and geographically smoothed version of the FPLI, denoted FPLI_AS, as the basis of the DCD, to be calculated as described in this report.
- 2) Either drop the sparsity supplement entirely, after which small districts may merge with other districts at their discretion if they believe there truly is an advantage to being larger, or, scale it back greatly and base it on a thorough and modern econometric study of scale economies in Florida's schools.
- 3) Drop the wealth adjustment to the sparsity calculation immediately if the sparsity supplement is retained.
- 4) Allow unequalized discretionary millage to be increased until a district's funding equals the national average per FTE. If this is infeasible, retain at least the current level of discretionary millage, unlinked from the sparsity supplement, and consider increasing the unequalized cap as much as possible.
